### ABSTRACT

A disposable aerosol generator for use with an inhaler device, which includes a heater adapted to volatilize liquid fluid stored in the disposable aerosol generator and a method of using the inhaler, is provided. The disposable body includes a sealed chamber and an openable outlet. The ~~the~~ chamber is located between first and second layers of material. The chamber holds liquid, ~~a predetermined volume of a fluid~~ which is expelled through the opened outlet when the fluid in the chamber is volatilized by the heater. The disposable body can include a series of spaced apart aerosol generators, each of which can be advanced to a release position at which the heater can heat one of the fluid containing chambers. Prior to heating the liquid fluid, the outlet can be opened ~~formed by severing the first and/or second layer with a piercing element~~ and the volatilized fluid can be expelled from the opened outlet into a passage of a dispensing member.
